Appl. No. 10/523,396 January 17, 2007

AMENDMENTS TO THE CLAIMS:

Please amend claim 22 as follows.

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1. -16 (cancelled)
- 17. (previously presented) A method as claimed in claim 22 wherein the step of calibrating the first magnetic field sensing device comprises using a correction model.
- 18. (previously presented) A method as claimed in claim 22 wherein the correction model comprises a gain term and an offset term.
- 19. (previously presented) A method as claimed in claim 22 wherein the estimator algorithm comprises an extended Kalman filter algorithm.
- 20. (previously presented) A method as claimed in claim 22 further comprising the step of continually deriving the most likely position of the position sensor relative to the object in real time.
 - 21. (cancelled)

method comprising the steps of:

22. (currently amended) A method of determining a drilling location on a wing skin, such that a boltan attachment hole can be drilled through the wing skin and a supporting structure, the

- (a) placing an object having an associated magnetic field on the supporting structure at the drilling location;
- (b) locating a position sensor on the wing skin, the position sensor comprising first and second magnetic field sensing devices, said first magnetic field sensing device located at a first position and the second magnetic field sensing device located at a second position, said second position different from said first position;
- (c) calibrating the first magnetic field sensing device, thereby deriving a first calibration;
- (d) calibrating the second magnetic field sensing device, thereby deriving a second calibration;
- (e) predicting the associated magnetic field using a mathematical model to obtain a predicted magnetic field;
- (f) sensing a first signal related to the magnetic field at the first position from the first magnetic field sensing device, and using the first calibration to derive a first measured magnetic field from the first signal;
- (g) sensing a second signal related to the magnetic field at the firstsecond position from the firstsecond magnetic field sensing device, and using the second calibration to derive a second measured magnetic field from the second signal;

Appl. No. 10/523,396 January 17, 2007

- comparing the predicted magnetic field with the first and second measured (h) magnetic fields using an estimator algorithm, thereby calculating a most likely position of the object relative to the position sensor;
- maneuvering the position sensor on the wing skin towards the calculated most (i) likely position; and
 - repeating steps (f) to (i) above, until the drilling location is determined; and (j)
 - drilling said attachment hole at said drilling location.
- 23. (previously presented) The method according to claim 22, wherein the step of calibrating the first magnetic field sensing device comprises the step of placing the position sensor at a known position relative to the object, in said known position the position sensor is separated from the object by a wing skin of predetermined thickness.
- 24. (previously presented) The method according to claim 22, wherein the object comprises a cylindrical magnetic object.
- 25. (previously presented) The method according to claim 22, wherein the magnetic field sensing devices comprise Hall effect sensing devices.
 - 26. (previously presented) A portable device for performing the method of claim 22.

ALEXANDER et al Appl. No. 10/523,396 January 17, 2007

27. (previously presented) A computer program product comprising a readable storage medium containing computer readable instructions for controlling a computer to perform steps (c) through (h) of the method of claim 22.
